(a) Transfer: can skill states help another execution?
Correct-skill donor
Skill-span states at layer L
Copy states into receiver
Keep its prior caches and history
Wrong-skill receiver
Recovered skill benefit: $\rho(L)$
(b) Dependence: does the original execution still need the skill?
Correct-skill execution
Skill and question in context
Block attention to skill
From layer L onward
Original execution continues
Retained performance: $q(L)$
