(a) recovery under spread position selections
recovery ρ
evenly spaced
random
largest ‖d_p‖
same differences, misplaced
after the span
whole span, own states
positions written (layer 8)
(b) same budget, different block selections
256 positions, random single positions
half the span, random single positions
256 positions
half the span
number of contiguous blocks (token budget fixed)
(c) where one contiguous block is centred
256 positions
half the span

procedure
description
random
worked example
section the block is centred on
(d) span differences displaced by D positions
cyclic shift
shifted later, no wrap
shifted earlier, no wrap
in place, first/last 1 or 16 dropped
random permutation
displacement D (positions; last point: half the span)
